List Methods #2

- The methods used to remove elements from a list are

  pop([ ]) , remove(x) and clear ( )

pop([ ])

- It will delete the last element from a list if index is not given
- By mentioning any index of a list in pop( ) that particular element will be deleted

The del keyword is used to delete an element from a list , slicing works for del keyword , we can also delete a particular element by mentioning the index number
